EXPERIENCE

Data Scientist October 2024 - Present
Self-Employed Chicago, IL

Built end-to-end projects incorporating causal inference, geospatial data, AI summarization. Deployed ETL pipelines on Azure, published static sites with Github Actions, optimized prompts and labeled golden test sets.

- Shipped MVP website in 5 weeks, including web scraper, rate limiter, and RAG queries
- Implemented incremental dbt SQL feature engineering pipeline to reduce build time

Data Scientist July 2022 - February 2024
The University of Chicago, Justice Project Chicago, IL

Developed reproducible Python data pipelines to standardize messy large-scale administrative data. Fine-tuned LLM's for text classification, entity recognition, and record linkage. Directed 12 graduate student assistants in small project teams handling web scraping, ArcGIS mapping, and FOIA requests.

- Co-authored peer-reviewed article using data mining and network analysis; contributed to 3 more papers
- Compiled police finance dataset mapping \$1.3B in donations, with 10x more coverage than previous studies

Machine Learning Research Assistant October 2021 - May 2022
Toyota Technological Institute at Chicago Chicago, IL

Trained speech-to-text (ASR) convolutional neural net architectures in PyTorch on multi-GPU cluster.

- Achieved state-of-the-art accuracy (character error rate) on noisy field-observed police radio dataset

Data Science Research Assistant June 2021 - September 2021
The University of Chicago, Data Science Institute Chicago, IL

Tracked palm oil industry environmental compliance by analyzing high-res satellite images in Python (rasterio).

- Parallelized non-trivial image partitioning algorithm onto high-performance computing cluster using Slurm

Software Engineer, R&D September 2019 - March 2020
Concentric, Inc. Cambridge, MA

Identified and prototyped improvements to Concentric's simulation and marketing attribution models.

- Fixed uncertainty quantification edge cases in E.W. Scripps' election forecasts, advancing a \$1M+ license deal
- Shortened field deployments by 1 day by incorporating data consistency checks into new self-guided UX
- Reduced machine learning training time by 2 hours by investigating and replacing optimization algorithm

Software Engineer, QA July 2016 - August 2019
Concentric, Inc. Cambridge, MA

Curated and triaged Java unit and integration tests and Bitbucket CI/CD; supported AWS-hosted Apache Ignite cluster, MySQL database, and desktop GUI. Collaborated with internationally distributed 8-person dev team.

- Shipped 13 major software releases; selected high-impact test sets to mitigate risk under strict time budgets
- Published white paper that illustrated Concentric's methodology for non-technical users

Software Developer September 2013 - June 2016
McMaster Carr Supply Company Elmhurst, IL

Implemented full-stack DevOps projects in C# / SQL / JS. Interviewed project teams to assess departmental needs.

- Generated company's first machine learning training dataset: deployed REST API endpoints, C# batch migration pipeline, and Neo4j graph database capturing production web telemetry
- Guided Git adoption and standards across 60-person engineering department

EDUCATION

The University of Chicago — M.S. Computational Analysis and Public Policy

Carnegie Mellon University — B.S. Physics

PROJECTS

Machine Learning Engineer

June 2026 - Present

Soccer Analytics

- Defined complex feature engineering transformations in SQL (dbt) across 40M time series data points
- Trained XGBoost classifiers integrated with MLFlow for reproducible hyper-parameter optimization

Software Engineer

October 2025 - April 2026

tos-watch.com

- Built evaluation pipelines and regression test suites to measure semantic quality of AI-generated summaries
- Implemented RAG and actor-critic patterns to ensure grounded outputs; systematically curated in-context learning examples with Argilla inside custom evals harness; reduced base Claude false-positive rate by 27%
- Developed scalable server-less data pipelines using Azure Functions, blob storage, and GitHub Actions
- Shipped MVP in 5 weeks; serves 3,000 MAU

Data Scientist

March 2025 - May 2025

Quantify Justice News

- Extracted crime locations across a decade of local news articles using SpaCy and road network shapefiles
- Decomposed project into verifiable classification and NER subtasks; orchestrated training/evals in Dagster
- Optimized model performance with MLFlow and Optuna, exceeding accuracy of generic frontier models

Data Scientist

October 2024 - February 2025

DNC Impact on Chicago Transit

- Owned end-to-end econometric study of how the DNC security perimeter affected local and city-wide traffic
- Queried, cleaned, and merged spatial data from government APIs using efficient Socrata SQL queries; normalized historical schema drift, mismatched geographies, and false GPS readings
- Ran statistical regressions (difference-in-difference, fixed effects) to measure causal impact in statsmodels; validated statistical significance with power calculations, parallel pre-trends tests, and placebo tests

CERTIFICATIONS

Microsoft Certified: Power BI Data Analyst Associate

October 2025

Microsoft Certified: Azure Data Fundamentals

October 2025

Microsoft Certified: Azure Fundamentals

July 2024

SKILLS

Orchestration

Dagster, DVC, Github Actions, Bitbucket Pipelines

MLOps

MLFlow, Optuna, Argilla, Label Studio

Cloud & Infrastructure

Azure Blob Storage, Azure Functions, Docker, MySQL

Machine Learning & Analysis

Python, SQL, pandas, scikit-learn, SpaCy
